Serial No.10/762,587 60130-2002; 02MRA0149

AMENDMENT

IN THE CLAIMS:

- 1. (CURRENTLY AMENDED) A gear reduction unit comprising:
 - a drive shaft;
 - an electric motor that rotatably drives the drive shaft;
 - a reduction gear driven by the drive shaft;
 - a geared motor housing that houses the reduction gear;
 - a magnet disposed on the drive shaft; and
- a connector that is removeably connected to the geared motor housing, wherein when the geared motor housing is maintained permanently assembled to the electric motor, and wherein the connector includes a current carrying feature electrical supply contacts for feeding current to the electric motor and a sensor disposed proximate to the magnet.
- 2. (PREVIOUSLY PRESENTED) The gear reduction unit according to claim 1, wherein a distance between the sensor and the magnet is less than 4 mm.
- 3. (PREVIOUSLY PRESENTED) The gear reduction unit according to claim 2, wherein the distance between the sensor and the magnet is 2 mm.
- 4. (ORIGINAL) The gear reduction unit according to claim 1, wherein the magnet is a ring having at least one North pole and at least one South pole and is polarized transverse to a longitudinal axis of the drive shaft.
- 5. (ORIGINAL) The gear reduction unit according to claim 4, wherein the magnet has a plurality of North poles and a plurality of South poles.
- 6. (CURRENTLY AMENDED) The gear reduction unit according to claim 1, wherein the connector comprises a printed circuit board defining a plane, wherein the sensor is fixed to the printed circuit board and offset relative to the plane formed_defined_by the printed circuit board.

Serial No.10/762,587 60130-2002; 02MRA0149

- (PREVIOUSLY PRESENTED) The gear reduction unit according to claim 6, further
 comprising connection tabs that are fitted to the sensor to fix the sensor to the printed circuit
 board.
- 8. (CANCELLED)
- 9. (PREVIOUSLY PRESENTED) The gear reduction unit according to claim 1, wherein the connector includes a guide hole and the sensor is disposed in the guide hole.
- 10. (PREVIOUSLY PRESENTED) The gear reduction unit according to claim 1, wherein the electric motor comprises a housing and the connector comprises a case, wherein an interface between the housing and the case forms a watertight seal.
- 11. (ORIGINAL) The gear reduction unit according to claim 1, wherein the sensor is a Hall effect sensor.
- (CURRENTLY AMENDED) A connector for a gear reduction unit comprising:
 a printed circuit board defining a plane;
- a sensor fixed to the printed circuit board and offset relative to the plane formed-defined by the printed circuit board, wherein the sensor is fitted with connection tabs that offset the sensor; and
 - a case housing the printed circuit board and the sensor.
- 13. (PREVIOUSLY PRESENTED) The connector according to claim 12, wherein the connection tabs fix the sensor to the printed circuit board.
- 14. (CURRENTLY AMENDED) The connector according to claim 12, further comprising electrical supply contacts for supplying current to a motor in a the gear reduction unit.
- 15. (PREVIOUSLY PRESENTED) The connector according to claim 12, wherein the case includes a guide hole and wherein the sensor is disposed in the guide hole.

Serial No.10/762,587 60130-2002; 02MRA0149

- 16. (ORIGINAL) The connector according to claim 12, wherein the sensor is a Hall effect sensor.
- 17. (CURRENTLY AMENDED) The gear reduction unit as-recited-inaccording to claim 1, wherein the connector includes a releasable fastener that releasably secures the connector in the gear reduction unit.
